Surgical Spotlight™

ILLUMINATING THE BUSINESS OF SURGERY

The **ORHub Surgical Spotlight™** is a cloud-based data analytics tool that helps Perioperative leadership gain visibility into the key metrics that drive efficiency in the Perioperative lifecycle.

Should an additional room be opened?

Should a surgeon get more block time?

Are turnover times improving?

How can we improve surgical scheduling accuracy?

Are staffing levels aligned with volume?

What is the cost per case?

Overview

Surgical Spotlight™ answers these questions and more. Using industry standard Key Performance Indicators (KPIs), Spotlight™ quickly recognizes how your OR is performing. Running an Operating Room is extremely costly. Spotlight helps you discover the best financial improvements to implement.

View an interactive report for each KPI to drill down into the details for actionable data. Each report illuminates the opportunities for productivity and financial improvement. ORHub **Surgical Spotlight™** is more than just a typical dashboard.

Implementation of **Surgical Spotlight™** is lightweight: rollout as quick as two weeks. No EHR integration or hardware required. Our Software as a Service (SaaS) product requires only four simple data feeds and is PHI-free. Ongoing training and education supported.

Pay-per-use pricing, a nominal subscription and implementation fee with no hidden fees. No long term contracts.

KPIs

OR Volume • PACU Volume
OR & PACU Occupancy by Hour of Day
Turnover Time • On Time Starts
Scheduling Accuracy • Cost Per Case
Primetime Staff/Room Utilization
Block Utilization • Overlapping Surgery
